

# The BT Copper to Fibre Switch

Copper telephone wires  
will be phased out by 2026.

# In December 2025, BT will switch off copper telephone wires.

## What does it mean for you and your business?

If you use:

- PSTN - Basic copper phone lines
- ADSL lines - First generation broadband
- ISDN lines - Old-fashioned telephone systems

You'll eventually need to switch over to a fast, reliable fibre-enabled service.

### A boost for business

The switch to fibre is a positive step.

It'll support technologies like video conferencing and VoIP that can help you work smarter.

- ✓ Faster speeds, to process data quicker
- ✓ Better value, saving up to 60% on telephone bills
- ✓ More reliable, with a first-rate connection 24/7
- ✓ Greater potential, supporting flexible and remote working

### Action plan

1. Check the phone and internet services you're currently using
2. Create a wish-list to decide which technologies you'll need
3. Talk to a telecoms specialist and make the plan a reality

Future-proof your business and prepare for the switch.
